The flagship of the Royal Sky Fleet, the HML *Leviathan* little resembles the vessel that first took to the skies above Whale Island. Now the fourth iteration, the vessel has seen conflict at the four corners of the globe. Festooned with barbettes and turrets, the *Leviathan* is perhaps the grandest of the aether flyers in the skies today. She has never been defeated in combat, and with her reputation, it seems difficult to imagine she will ever fall. Currently deployed in the Middle East, the *Leviathan* has had to face down continued French probes into Empire territory. Sky Captain Kent Graham has been particularly effusive about the actions of one his gunnery officers, Lieutenant David Chandler. If the rumors of the new Director of Aerial Ordnance prove true, it seems Chandler would be a natural addition to Dreyer’s team.

**Leviathan-class Battleship**

- **Dimensions:** 439 ft. x 78 ft. x 86 ft. (excluding funnels & masts)
- **Complement:** 582
- **Weight:** 16,350 tons
